

[2017 New Lead2pass 2017 100% Real 70-762 Exam Questions (1-20)]

2017 May Microsoft Official New Released 70-762 Dumps in Lead2pass.com! 100% Free Download! 100% Pass Guaranteed! Our PDF dumps of 70-762 exam is designed to ensure everything which you need to pass your exam successfully. At Lead2pass, we have a completely customer oriented policy. We invite the professionals who have rich experience and expert knowledge of the IT certification industry to guarantee the PDF details precisely and logically. Our customers' time is a precious concern for us. This requires us to provide you the products that can be utilized most efficiently. Following questions and answers are all new published by Microsoft Official Exam Center: <http://www.lead2pass.com/70-762.html>

QUESTION 1 You have a database that contains the following tables: BlogCategory, BlogEntry, ProductReview, Product, and SalesPerson. The tables were created using the following Transact SQL statements: You must modify the ProductReview Table to meet the following requirements: 1. The table must reference the ProductID column in the Product table 2. Existing records in the ProductReview table must not be validated with the Product table. 3. Deleting records in the Product table must not be allowed if records are referenced by the ProductReview table. 4. Changes to records in the Product table must propagate to the ProductReview table. You also have the following database tables: Order, ProductTypes, and SalesHistory. The transact-SOL statements for these tables are not available. You must modify the Orders table to meet the following requirements: 1. Create new rows in the table without granting INSERT permissions to the table. 2. Notify the sales person who places an order whether or not the order was completed. You must add the following constraints to the SalesHistory table: - a constraint on the SaleID column that allows the field to be used as a record identifier - a constant that uses the ProductID column to reference the Product column of the ProductTypes table - a constraint on the CategoryID column that allows one row with a null value in the column - a constraint that limits the Sale Price column to values greater than four Finance department users must be able to retrieve data from the SalesHistory table for sales persons where the value of the SalesYTD column is above a certain threshold. You plan to create a memory-optimized table named SalesOrder. The table must meet the following requirements: - The table must hold 10 million unique sales orders. - The table must use checkpoints to minimize I/O operations and must not use transaction logging. - Data loss is acceptable. Performance for queries against the SalesOrder table that use Where clauses with exact equality operations must be optimized. You need to modify the design of the Orders table. What should you create? A. a stored procedure with the RETURN statement B. a FOR UPDATE trigger C. an AFTER UPDATE trigger D. a user defined function

Answer: A

QUESTION 2 You are developing an application to track customer sales. You need to create an object that meet the following requirements: - Run managed code packaged in an assembly that was created in the Microsoft.NET Framework and uploaded in Microsoft SQL Server. - Run within a transaction and roll back if a failure occurs. - Run when a table is created or modified. What should you create? A. extended procedure B. CLR procedure C. user-defined procedure D. DML trigger E. scalar-valued function F. table-valued function

Answer: C

QUESTION 3 Hotspot Question You have a database that contains the following tables: BlogCategory, BlogEntry, ProductReview, Product, and SalesPerson. The tables were created using the following Transact SQL statements: You must modify the ProductReview Table to meet the following requirements: 1. The table must reference the ProductID column in the Product table 2. Existing records in the ProductReview table must not be validated with the Product table. 3. Deleting records in the Product table must not be allowed if records are referenced by the ProductReview table. 4. Changes to records in the Product table must propagate to the ProductReview table. You also have the following database tables: Order, ProductTypes, and SalesHistory. The transact-SOL statements for these tables are not available. You must modify the Orders table to meet the following requirements: 1. Create new rows in the table without granting INSERT permissions to the table. 2. Notify the sales person who places an order whether or not the order was completed. You must add the following constraints to the SalesHistory table: - a constraint on the SaleID column that allows the field to be used as a record identifier - a constant that uses the ProductID column to reference the Product column of the ProductTypes table - a constraint on the CategoryID column that allows one row with a null value in the column - a constraint that limits the Sale Price column to values greater than four Finance department users must be able to retrieve data from the SalesHistory table for sales persons where the value of the SalesYTD column is above a certain threshold. You plan to create a memory-optimized table named SalesOrder. The table must meet the following requirements: - The table must hold 10 million unique sales orders. - The table must use checkpoints to minimize I/O operations and must not use transaction logging. - Data loss is acceptable. Performance for queries against the SalesOrder table that use where clauses with exact equality operations must be optimized. You need to update the SalesHistory table. How should you complete the Transact_SQL statement? To answer, select the appropriate TransactSQL, segments in the answer area. **Answer: QUESTION 4** Drag and Drop Question You are analyzing the performance of a database environment. You suspect there are several missing indexes in the current database. You need to return a prioritized list of the missing indexes on the current database. How should you complete the Transact-SOL statement? To answer, drag the appropriate Transact-SOL segments to the correct location s.

Each Transact-SQL segment may be used once, more than once or not at all. You may need to drag the split bar between panes or scroll to view content. Answer: QUESTION 5 Drag and Drop Question You are monitoring a Microsoft Azure SQL Database. The database is experiencing high CPU consumption. You need to determine which query uses the most cumulative CPU. How should you complete the Transact-SQL statement? To answer, drag the appropriate Transact-SQL segments to the correct locations. Each Transact-SQL segment may be used once, more than one or not at all. You may need to drag the split bar between panes or scroll to view content. Answer: QUESTION 6 Drag and Drop Question You are analyzing the memory usage of a Microsoft SQL Server instance. You need to obtain the information described on the following table. Which performance counter should you use for each requirement? To answer, drag the appropriate performance counters to the correct requirements. Each performance counter may be used once, more than once or not at all. You may need to drag the split bat between panes or scroll to view content. NOTE: Each correct selection is worth one point. Answer: QUESTION 7 You have a view that includes an aggregate. You must be able to change the values of columns in the view. The changes must be reflected in the tables that the view uses. You need to ensure that you can update the view. What should you create? A. table-valued function B. a schema-bound view C. a partitioned view D. a DML trigger Answer: B QUESTION 8 Drag and Drop Question You are creating a stored procedure which will insert data into the table shown in the Database schema exhibit. (Click the exhibit button.) You need to insert a new customer record into the tables as a single unit of work. Which five Transact-SQL segments should you use to develop the solution? To answer, move the appropriate Transact-SQL segments to the answer area and arrange the, in the correct order. NOTE: More than one order of answer choices is correct. You will receive credit for any of the correct orders you select. Answer: QUESTION 9 You are a database developer for a company. The company has a server that has multiple physical disks. The disks are not part of a RAID array. The server hosts three Microsoft SQL Server instances. There are many SQL jobs that run during off-peak hours. You must monitor and optimize the SQL Server to maximize throughput, response time, and overall SQL performance. You need to identify previous situations where a modification has prevented queries from selecting data in tables. What should you do? A. Create a sys.dm_os_waiting_tasks query. B. Create a sys.dm_exec_sessions query. C. Create a Performance Monitor Data Collector Set. D. Create a sys.dm_os_memory_objects query. E. Create a sp_configure 'max server memory' query. F. Create a SQL Profiler trace. G. Create a sys.dm_os_wait_stats query. H. Create an Extended Event. Answer: G QUESTION 10 You are a database developer for a company. The company has a server that has multiple physical disks. The disks are not part of a RAID array. The server hosts three Microsoft SQL Server instances. There are many SQL jobs that run during off-peak hours. You observe that many deadlocks appear to be happening during specific times of the day. You need to monitor the SQL environment and capture the information about the processes that are causing the deadlocks. What should you do? A. A. Create a sys.dm_os_waiting_tasks query. B. Create a sys.dm_exec_sessions query. C. Create a Performance Monitor Data Collector Set. D. Create a sys.dm_os_memory_objects query. E. Create a sp_configure 'max server memory' query. F. Create a SQL Profiler trace. G. Create a sys.dm_os_wait_stats query. H. Create an Extended Event. Answer: F QUESTION 11 You are a database developer for a company. The company has a server that has multiple physical disks. The disks are not part of a RAID array. The server hosts three Microsoft SQL Server instances. There are many SQL jobs that run during off-peak hours. You must monitor the SQL Server instances in real time and optimize the server to maximize throughput, response time, and overall SQL performance. What should you do? A. A. Create a sys.dm_os_waiting_tasks query. B. Create a sys.dm_exec_sessions query. C. Create a Performance Monitor Data Collector Set. D. Create a sys.dm_os_memory_objects query. E. Create a sp_configure 'max server memory' query. F. Create a SQL Profiler trace. G. Create a sys.dm_os_wait_stats query. H. Create an Extended Event. Answer: B QUESTION 12 You are a database developer for a company. The company has a server that has multiple physical disks. The disks are not part of a RAID array. The server hosts three Microsoft SQL Server instances. There are many SQL jobs that run during off-peak hours. You must monitor the SQL Server instances in real time and optimize the server to maximize throughput, response time, and overall SQL performance. You need to ensure that the performance of each instance is consistent for the same queried and query plans. What should you do? A. Create a sys.dm_os_waiting_tasks query. B. Create a sys.dm_exec_sessions query. C. Create a Performance Monitor Data Collector Set. D. Create a sys.dm_os_memory_objects query. E. Create a sp_configure 'max server memory' query. F. Create a SQL Profiler trace. G. Create a sys.dm_os_wait_stats query. H. Create an Extended Event. Answer: H QUESTION 13 You are a database developer for a company. The company has a server that has multiple physical disks. The disks are not part of a RAID array. The server hosts three Microsoft SQL Server instances. There are many SQL jobs that run during off-peak hours. You must monitor the SQL Server instances in real time and optimize the server to maximize throughput, response time, and overall SQL performance. You need to collect query performance data while minimizing the performance impact on the SQL Server. What should you do? A. Create a sys.dm_os_waiting_tasks query. B. Create a sys.dm_exec_sessions query. C. Create a Performance Monitor Data Collector Set. D. Create a sys.dm_os_memory_objects query. E. Create a sp_configure 'max server memory' query. F. Create a SQL Profiler trace.

G. Create a sys.dm_os_wait_stats query.H. Create an Extended Event. Answer: C QUESTION 14You are a database developer for a company. The company has a server that has multiple physical disks. The disks are not part of a RAID array. The server hosts three Microsoft SQL Server instances. There are many SQL jobs that run during off-peak hours. You must monitor the SQL Server instances in real time and optimize the server to maximize throughput, response time, and overall SQL performance. You need to create a baseline set of metrics to report how the computer running SQL Server operates under normal load. The baseline must include the resource usage associated with the server processes. What should you do? A. A. Create a sys.dm_os_waiting_tasks query.B. Create a sys.dm_exec_sessions query.C. Create a Performance Monitor Data Collector Set.D. Create a sys.dm_os_memory_objects query.E. Create a sp_configure 'max server memory' query.F. Create a SQL Profiler trace.G. Create a sys.dm_os_wait_stats query.H. Create an Extended Event. Answer: D QUESTION 15Hotspot QuestionYou have a database named Sales. You need to create a table named Customer that includes the columns described in the following table: How should you complete the Transact SQL statement? To answer, select the appropriate TransactSQL segments in the answer area. Answer: QUESTION 16Hotspot QuestionYou are developing an app that allows users to query historical company financial data. You are reviewing email messages from the various stakeholders for a project. The message from the security officer is shown in the Security Officer Email exhibit below. TO: Database developerFrom: Security OfficerSubject: SQL object requirementsWe need to simplify the security settings for the SQL objects. Having to assign permissions at every object in SQL is tedious and leads to a problem. Documentation is also more difficult when we have to assign permissions at multiple levels. We need to assign the required permissions at one object, even though that object may be obtaining from other objects. The message from the sales manager is shown in the Sales Manager Email exhibit below. TO: Database developerFrom: Sales ManagerSubject: Needed SQL objectsWhen creating objects for our use, they need to be flexible. We will be changing the base infrastructure frequently. We need components in SQL that will provide backward compatibility to our front end applications as the environments change so that do not need to modify the front end applications. We need objects that can provide a filtered set of the data. The data may be coming from multiple tables and we need an object that can provide access to all of the data through a single object reference. This is an example of the types of data we need to be able to have queries against without having to change the front end applications. The message from the web developer is shown in the Web Developer Email exhibit below. TO: Database developerFrom: Web DeveloperSubject: SQL Object componentWhatever you will be configuring to provide access to data in SQL, it needs to connect using the items referenced in this interface. We have been using this for a long time, and we cannot change this from end easily. Whatever objects are going to be used in SQL they must work using object types this interface references. You need to create one or more objects that meet the needs of the security officer, the sales manager and the web developer. For each of the following statements, select Yes if the statement is true. Otherwise, select No. Answer: QUESTION 17You have a database that contains a table named Employees. The table stored information about the employees of your company. You need to implement the following auditing rules for the Employees table: - Record any changes that are made to the data in the Employees table.- Customize the data recorded by the audit operations. Solution: You implement a user-defined function on the Employees table. Does the solution meet the goal? A. YesB. No Answer: A QUESTION 18You have a database that contains a table named Employees. The table stored information about the employees of your company. You need to implement the following auditing rules for the Employees table: - Record any changes that are made to the data in the Employees table.- Customize the data recorded by the audit operations. Solution: You implement a check constraint on the Employees table. Does the solution meet the goal? A. YesB. No Answer: B QUESTION 19 You have a database that contains a table named Employees. The table stored information about the employees of your company. You need to implement the following auditing rules for the Employees table: - Record any changes that are made to the data in the Employees table.- Customize the data recorded by the audit operations. Solution: You implement a stored procedure on the Employees table. Does the solution meet the goal? A. YesB. No Answer: B QUESTION 20Your company has employees in different regions around the world. You need to create a database table that stores the following employee attendance information: - Employee ID- date and time employee checked in to work- date and time employee checked out of work Date and time information must be time zone aware and must not store fractional seconds. Solution: You run the following Transact-SQL statement: Does the solution meet the goal? A. YesB. No Answer: B If you want to get more 70-762 exam preparation material, you can download the free 70-762 braindumps in PDF files on Lead2pass. It would be great helpful for your exam. All the 70-762 dumps are updated and cover every aspect of the examination. Welcome to choose. Microsoft 70-762 new questions on Google Drive: <https://drive.google.com/open?id=0B3Syig5i8gpDY2hzNXZncVYwRWc> 2017 Microsoft 70-762 exam dumps (All 70 Q&As) from Lead2pass: <http://www.lead2pass.com/70-762.html> [100% Exam Pass Guaranteed]
